

UM.1 Mirror and Panel Frame Series/System

System details

Appearance:

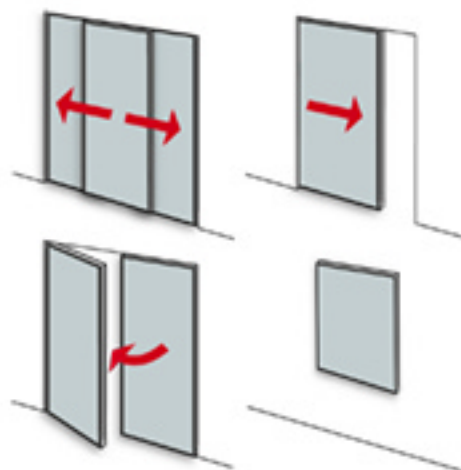

The UM.1 system features a low profile frame system that showcases the mirror or alternate panel material for a clean and simplified look over traditional systems. The floating frame structure is made of aluminum and is both lightweight and rigid. The result is a solid quality feel without overstressing mounting or working hardware.

Application:

Suggested configurations for both new constructions or retro-fit applications:

By-Pass

Our unique hardware offers a single overhead track with a tasteful single central guide assembly on the floor, allowing for a seamless continuity of flooring in to the partitioned area.

Pocket

Similar to the By-Pass System, but with a single track, our panel assemblies are an excellent alternative to traditional solid pocket doors. This allows for backlighting or a reflective surface to enhance various architectural features.

Hinged

With our custom hardware, our panels can be hinged as an alternative to our By-Pass System or as doors to inset wall cabinets.

Wall-Mounted

Individual panels can be hung with no visible fasteners, using available hardware.

Custom - Specific application and installation services are available.

Assembly:

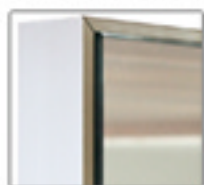

All panel frames are prefabricated and assembled to your exact dimensions. All installation hardware is included and specific to each application type.

Finish :

The insert panel materials are numerous and can be customized to compliment any décor. The frame is available in an array of anodized colours. Custom powder-coated finishes are also available.

natural

champagne

gold

dark grey

black

Warranty:

10 year materials.

How to Order:

Please measure inside dimensions of door jam and contact Urban Image for quantities and pricing and to discuss all your partition needs.
